Beauty from Within

We are seeing rising demand, globally, for fortified food items and nutritional supplementation as consumers become increasingly health conscious. With growing consumer attention to alternative remedies, coupled with upwards of 40% of Europeans regularly supplementing their diets, we suspect this trend will increase.

Be it supplementation for optimal sports performance, joint care, injury, illness, or to give us an extra boost, it's clear to see that there is "buy-in" to the enhancement that nutritional supplementation can achieve.

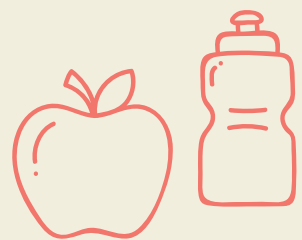

Ingestible beauty is a strong growth sector with innovations progressing to allow for a targeted approach to beauty

supplementation. Ingestible solutions are being developed for specific concerns including, wrinkles, hair loss, menopause symptoms, and many more.

European regulations are becoming more stringent, and rightly so. Information is constantly developing, so it is of utmost importance that our customers be well-informed of these changes, and source material from quality and reputable sources, that are also subject to regulated controls.

Our range of dietary supplements and functional ingredients includes amino acids, joint care products, vitamins, botanicals, and ergogenic aids.

Your Reliable Supply Partner

Amino Acids

A large proportion of our cells, muscles, and tissue is made up of amino acids, meaning they carry out many important bodily functions, such as giving cells their structure. They also play a key role in the transport and storage of nutrients. Amino acids have an influence on the function of organs, glands, tendons and arteries. Furthermore, they are essential for healing wounds and repairing tissue, especially in the muscles, bones, skin and hair as well as for the removal of all kinds of waste deposits produced in connection with the metabolism.
